High School Revue Introduces Many Theatre Novelties

First Entertainment Of Its
Kind In Redcliff

Friday March the 8th is the date set for the first High School Revue ever presented in town.

The Little Theatre that night will be the rendezvous of many people in Redcliff and Medicine Hat who are hungry for entertainment of a different kind. Forty performers take part in this show, the costumes and wigs being supplied by the Calgary Costume and Wig Shop.

The first part of the program will consist of an oratorical competition at which three Medicine Hat judges will officiate. The winners will receive a gold medal emblematic of the school championship.

Emma Podesta appears first in a great speech on "The National Understanding." All returned men will want to hear this. Reggie Rose follows with a topic especially interesting to Dominion Glass Company employees "The Toll of Speed Hysteria." Ruth Poo appears in a dynamic mystery costume called "Liliputians," and finally Jim Brown appears in "What a Right With Youth" which will be a drama in the way of the young people in town.

The second part of the program is a twenty-first century revue called "Roll O' Top." And full of pep it is! Woe, you start laughing when the curtain goes up and you just stay that way until it comes down. What does it? Well for one thing there is the craziest sketch you ever saw called "Wanted—a Photographer." Then there is a negro quartette singing such mad songs, to say nothing of a pair of escaped lunatics who entertain you for twenty minutes. Then the "Dumbel" appears in a take-off on "East Lyna" featuring "Red Nue" and Dan McGee himself. William Shakespeare appears next in person and he is followed by the comic twenty five piece orchestra conducted by John Phillip Sousa.

The funniest part about the revue is that the committee in charge went and set the price for this dollar show at thirty-five cents for adults and twenty cents for children. But its demand so it has developed into a High School treat for everyone in town. Last year there were many requests for the Literary Society to repeat the performance but those wishing to see the show this year must make an effort to be there on March 8th as there cannot possibly be a repeat performance owing to the cost of production and the nature of the entertainment.

Mrs. Inez Rindahl spent last week in Bowell visiting friends.

Friends of Mrs. Tanner met at the home of Mrs. B. Britt last Friday to join with her in celebration of her birthday. During the afternoon refreshments were served and Mrs. Tanner was presented with a number of suitable gifts. A most enjoyable afternoon was spent by all.

To Form Chamber of Agriculture

Will Be For Agriculture Same
Manufacturer's Assoc.

A national chamber of agriculture will be launched at the Royal Winter Fair in Toronto next November, agricultural representatives from all provinces decided.

A meeting called by western delegates following the Canadian Horticultural Council's 14th annual convention, and including numerous prairie organizations in Ottawa to confer with the Dominion Marketing Board, obtained co-operation of eastern agriculturalists for a national body precluding organizations of all westerners' chamber which had been mooted.

The proposed organization will occupy a place in agriculture similar to that of the Canadian Manufacturers' Association in industry. It is proposed to form a chamber will consolidate the expression of various provincial organizations already existing.

In that way agriculture would speak with a single voice to the government on national phases of the natural products marketing act.

High School Standing

(February Tests)

1. Kaja Madson; 2. Jean Paterson; 3. Zaida Barnhart; 4. Reggie Rose; 5. Ewey Band; 6. George Halliwell; 7. Carol Sellhorn; 8. Ralph Margrave; 9. Alice Buchholz; 10. Robert Poo; 11. Jessie Aratzen; 12. Ruth Poo; 13. Annie Schmidt; 14. Elmar Grogan; 15. Sarah Davies; 16. Douglas Lennox; 17. Emma Podesta; 18. Gordon Newmann; 19. Anne Bolton; 20. Leslie Leppard; 21. Sam Pute; 22. Phillipa Skidson; 23. Ellen Hope; 24. Curdas Buchholz; 25. Edlie Straton; 26. Susan Skidmore; 27. Doris Wright; 28. Jack Byde; 29. Helmer Kallstad; 30. Ede Fladen; 31. June McAllard; 32. B. Brown; 33. Kelt Ellis; 34. John Palmer; 35. Lillian Lenn; 36. Robert Buchholz; 37. Janet McAdams; 38. Edlie Harris; 39. Mary Broughton; 40. Edlie Collard; 41. Mary Fether; 42. David Peterson; 43. Jack Lenn; 44. Eva Lenn; 45. Arthur Gunderson; 46. Margaret Luthford.

"Forsaking All Others" is Witty Comedy

An all-star cast with the lead of "The Thin Man" will be the featured comedy in the new play "Forsaking All Others" Metro-Goldwyn-Mayer's new production, at the Monarch starting Thursday, March 7.

Joan Crawford, Clark Gable and Robert Montgomery, together with the first time head line cast which includes Billie Burke, Charles Butterworth, Francis Drake and Ted Healy.

With a line-up of this kind the greatest since "Dinner at Eight" and with the direction of W. S. Van Dyke (who directed "The Thin Man") it is natural that the new picture should be breaking records everywhere.

Septuagesima Sunday—February 17th 1935

This Week at Ottawa

Ottawa, February 22nd, 1935

On Monday the riving of the Division Bell called for a recorded vote on the second reading of the Unemployment Insurance Bill. Mr. Bennett admitted that almost all jurists, including himself, had always held the Social Legislation came under provincial jurisdiction but now he had changed his mind. In spite of the B. N. A. Act, he stated that the Dominion had made a treaty of convention at Geneva in 1919 endorsing Unemployment Insurance. This created an obligation and gave the party making the treaty the power to carry it out.

If there is a conflict between the Dominion and province in this is a "taxation" measure and the Dominion has the right to impose any tax, therefore, they can apply this measure. These reasons induce the Government to assume the power of putting the act on the statute book.

The average member feels that there should be uniformity in an Act of this kind and as it would be perhaps impossible to get all the provinces ever to agree on a uniform plan it should on that account be operated by the Dominion.

Clerks in stores, employees in flour mills, industries, garages, and railways will come under this Unemployment Act. We pointed out that many C. P. R. men who only get 2 or 3 months work a year would not be included as 40 weekly payments must be made in 2 years before any benefits would be obtained. Also no premiums will be accepted unless the person is actually employed in an accepted industry. After a waiting period of 3 days if the claim is accepted benefits will be paid for 15 weeks. Also there may be a dependent benefit of 90 cts. per week for a child and \$2.70 per week for an adult. If a man is paid for a long time and becomes unemployed he may get one additional day's benefit for each weekly payment he has made in years with a unemployment benefit.

If he leaves his work without just cause or has been discharged for misconduct he cannot get benefits.

Those employed in technical, nursing, banking, insurance or on a police force or in the service of Canada or any province or municipal authority do not come under the Act. Those engaged in farming, fishing, hunting and logging are also excluded. Domestic servants are not in the Act unless they work in a shop or restaurant or hotel. The Commission will later be expected to make recommendations to have cash included or excluded. Women pay \$1.21 per week, men pay \$2.21 per week, men over 65 pay \$1.21 per week when their claim is accepted and women \$8.10.

Therapy.

P. W. Gerhart.

On the 78th anniversary of his birthday, Lord Baden-Powell trained proposals of Governor-General Earl Bechochough for expansion of the Boy Scout movement in Canada and said they were "certain to benefit Canada's future development."

Little Theatre Association Met Last Evening

March 22nd as Date For
Next Entertainment

Despite the several other attractions there was a good attendance at the local Little Theatre monthly meeting held on the parish hall last evening.

During the business part of the program it was decided that the next public entertainment would be put on March 22nd when three one-act plays will be staged. The casts have been chosen and rehearsals are now in progress. It was also decided to enter the provincial festival season.

Communally singing, guessing games and character followed, which all entered most heartily. A definite lunch was then served after which the evening was brought to a close, with a "good-bye" song.

The evening was thoroughly enjoyed and evidence of renewed enthusiasm in support of the Association were seen on all sides.

To date then, have been 200 more car licenses taken out in this district than at the time last year.

As a result of revision of traveling rates on the C. P. R. the single fare to Medicine Hat is now 25c and the round trip is \$5 effective today.

Mrs. Holt, accompanied by her daughter, Mrs. W. Pickering left last Wednesday for Calgary where she has entered the hospital to undergo treatment.

The movie show at the parish hall last week-end was well patronized and all thoroughly enjoyed the pictures shown. The periodicals shows are becoming quite popular.

Monarch hockey team goes to Medicine Hat for a game in the first round of the Morgan trophy. The next game between these two teams will be held in Medicine Hat on Saturday evening of this week.

Douglas Consents to Come to Alberta

As Reconstruction Adviser to
The Provincial Govt.

Major C. H. Douglas, famous engineer and economist and founder of what has become known as the Social Credit movement, has replied to an invitation extended to him by Premier Poirer in behalf of the U. F. A. Government, consenting to come to Alberta as a "reconstruction adviser" to the Government. Negotiations are now proceeding as to terms.

The invitation was cable to Major Douglas by Mr. Reid, who expressed the desire of the government to retain his services as a financial adviser.

At the U. F. A. annual convention in January, a resolution was adopted with only two dissenting votes, asking the government to engage Major Douglas's services to suggest what initiatives should be taken in the province and also to draw up plans for the application of social credit principles in the Dominion as a whole.

Dude Ranger Packed With Quick Action

A picture which, according to all advance reports, tops any western drama George O'Brien has filmed, is scheduled to arrive at the Monarch Theatre next Monday.

This is "The Dude Ranger," described as a thrilling saga of the Arizona cattle lands. The fact that Zane Gray is the author of the new film in itself promises far more than usual for local audiences in the way of excitement, romance and authenticity of background.

This time Gray tells the story of Ernest Selby, sophisticated but sturdy young easterner, who comes to Arizona to claim a ranch inherited from his uncle. Before he has an opportunity to make his identity known to the ranch manager, his suspicious are aroused by the disappearance of several hundred head of cattle.

Mistaken for a cowboy in search of a job, he decides to masquerade in this role until he has cleared up the misunderstanding. In the meanwhile he has discovered another reason to extend his stay, in the person of the ranch manager's daughter.

Approximately 500 horses have died in Southern Saskatchewan from lack of feed.

Mr. J. Devitt left last week-end for Standard where he is visiting his son, Cecil.

A most successful tea and social was held under the auspices of Gordon Munro's Ladies Aid on Tuesday afternoon at the home of Mrs. H. G. Sheehy who acted as hostess.

Mrs. Poirer received the many guests and Mrs. Hayrave supervised the program which consisted of a selection on the guitar by Mrs. Buchholz, a monologue by Mrs. Trucker, and two guessing contests. Delicious refreshments were served, the hostess being assisted by Madeline Shimmer, Learmonth and Loridon.

Moore, Rindahl Elected To The Town Council

Election Held Last Monday
Drew Out 216 Voters

As a result of the election last Monday Mr. R. Moore and Mr. M. Rindahl were elected to serve on the Town Council for the next two years. Mr. C. Sewanh was re-elected by acclamation at the first nomination.

In 216 citizens voted and the result of the poll was as follows.

Moore	124
Rindahl	96
Morton	82
Hopie	76
Schneider	40
There were seven spoiled ballots.	

There were a few disappointed when they went to the polling booth and found their names were not on the list. There were mostly young people who have become of age since the last election and had not seen it at the proper time to get their names added to the list.

POUNDKEEPERS For 1935

The following have been appointed pound keepers for this district for 1935:

Suffield	H. S. Acland, N. W.

Be Self-Reliant

One of the most deplorable results of the world depression of the past few years, and especially unfortunate because the effects will be carried forward into the years to come after the depression has become a memory, is the breaking down of the morale of many people who for years have been unemployed. Unable to obtain employment anywhere, forced to accept government and municipal assistance, and with no immediate prospect of any change in the situation, the temptation to throw up the sponge and claim all self-reliance to help themselves, and to sit down in despair or idly accept the situation, has proven too strong for many people.

Enforced idleness, living without working and doing so at the expense of the State, has apparently convinced some people that it is no longer necessary that they should work even when work can be obtained. Such people now take the attitude that they do not owe anything to their country, but that their country owes them. They are not aware that they work for it, not that the State having provided for them when work could not be obtained, the State can just continue going on providing for their actual necessities of life. When employment is offered to this type of individual, he proceeds to compare the wages he will receive in exchange for his labor with the amount of assistance he has received, and decides that the increase in the amount he will receive does not compensate him for the fact that he will be required to work for it. He prefers idleness and relief.

At all times there is a strong temptation to this type of belief, but this number has been greatly increased during the past five years. Such people now look upon government assistance as a right, and they have no responsibility, not in the direction of helping themselves, but to organizing in groups to bring pressure upon governments to enlarge the distribution of relief. The cost of the same is paid, of course, by those who do work and are willing to work.

This break down in the morale of so many people is, let it be repeated, one of the most deplorable and most sinister effects of the world depression. It has not demoralized the vast majority of people who have been forced to work, but it has demoralized a small minority of people, and this has led to the most serious conditions of the world. It has led to the fact that there has been a great loss of self-reliance, and most unfortunately to the fact that many people are now and early twenties who, when they are affected, or will rise above the temptations of the moment, but the weaker ones show a marked tendency to drift with the tide rather than to exert themselves and battle the waves of adversity until the tide turns in their favor.

No useful purpose is served by painting a gloomy and discouraging picture unless it can be used to point a moral and teach a lesson. And it is the duty of all those who realize the existing tendency, and who appreciate its dangers, both present and future, to throw the whole weight of their experience and influence into the scale to maintain and promote the spirit of self-reliance, to teach the beauty of courage and the valour of despair, a very special and positive duty to discharge in this connection. Their responsibility is greater now than in times of prosperity.

It is the duty and responsibility of all to incite the timid into the minds of people that in its only useful and growing sense, life is a struggle. We must learn to walk by being carried, but by painstakingly making the effort to walk. So long as a young child is carried, it will never learn to walk, and until it does walk it will remain weak. Self-reliance must be taught throughout life, or life will be a tale of woe for those who have failed to learn.

We rightly pray "Lead us not into temptation," because temptation should be avoided, but temptation comes nevertheless in every moment and activity of life. So it is we further pray, "But deliver us from evil," strength comes from offering resistance, but those who would protect us against all hazards and the pitfalls of inexperience merely enable rather than strengthen us.

So long as the necessity continues for government aid to those who cannot help themselves because of causes and conditions beyond their control, such government aid must be provided. No man prides himself on being a minimum of such help, and only their own efforts to the fullest possible extent while looking forward to the day when they can joyfully surrender all such aid and stand again on their own feet and face the world with courage in full reliance upon their own initiative and power.

The Largest Chillion

At Bourville, England, the chillion installed in the tower of the village school has now become the largest in the world. The bells originally numbered 52, but a local family of distinction have made gifts of bells from time to time until the total has reached 68. The largest bell weighs over three tons, the smallest 22 pounds.

Job had patience—but he never had to wait six years for a job.

It takes an idle man to tell others just how a thing ought to be done.

Copyright Idea Old

The copyright principle was first established in the ancient Irish kingdom of Tara, according to Sir Edward German. When a monastery tried to copy a psalter made by a tourist trade, and the king ordered the infringing copy destroyed.

Will Maintain Lead

News that Imperial Airways is building a 70-passenger airplane, with speed, utility, safety and comfort as its outstanding characteristics shows that Britain intends to maintain her lead in commercial flying.

Treasures At Windsor Castle

Rhires Belonging To General Gordon And Kitchener Carefully Preserved. The corridors of Windsor Castle are hung with magnificent pictures; but in a conspicuous place is a crystal casket, resting on a white silk cushion. Inside the casket can be seen a worn, shabby little Bible, and one wonders how it came there. It is the Bible which belonged to General Gordon and was carried by him all through the long days of Khartoum. After the hero's death, the sacred volume was given to Queen Victoria, by his sister, and it has been preserved ever since in the manner described. Not far away is a Bible which belonged to Lord Kitchener. This is, of course, a comparatively recent addition to the treasures of the King's Berkshire home.

In the armory is a mishap, piece of lead worth nothing, pierced. It is a relic absolutely unique, being the bullet which wounded Nelson at the Battle of Trafalgar. Another memento of Britain's great naval hero is his bust, which is supported by a pedestal made out of part of the Victoria's mainmast. The marks of French shot can still be clearly seen on this historic piece of wood.

Canadian Scientist Honored

Dr. Gusson Elected President Of American Phyto-Pathological Society.

A distinctive honor has just been conferred on Dr. H. T. Gusson, of Ottawa, Dominion Botanist, Dominion Phyto-Pathologist, and, in addition, election to the presidency of the American Phyto-Pathological Society. The annual meeting was held in Pittsburgh, Pa., a few days ago. The society was organized in 1909 and has about 800 members, among whom are the leading plant pathologists and microbiological research workers in Canada and the United States. It is the only society of its kind in North America and is one of the most notable throughout the world among those of which scientific agriculturists are members. Dr. Gusson is a character of rare intellect and oral contributions to the society and to agriculture generally, and his papers are of great value. He is regarded as one of the outstanding authorities on bacterial diseases.

Powdered Whey

New Treatment Found For High Blood Pressure

How a new type of treatment for high blood pressure and tuberculosis came out of a chicken feed trough was disclosed by Dr. L. L. Stanley, San Quentin prison physician.

Seven years ago Dr. Stanley and Dr. Jas. Don Bell, San Francisco physician, heard poultryman at Petaluma, an egg production centre, were overcoming ailments of their flocks with powdered whey. They investigated and upon noting the results decided powder whey might be good for men as well as for chickens.

Dr. Stanley said powdered whey had been used with success to lower blood pressure in San Quentin prisoners and to build up the bodies of men afflicted with tuberculosis.

Trying Experiment

Marched To Test Television Between Italy And United States

A television experiment between Italy and the United States is to be conducted in a few months' time by Signor Mastro, according to an announcement made by the famous inventor when he spoke to the United States at the inauguration of a new radio station. He said that he would show his listeners by television the apparatus he had used for his recent experiments during which he navigated a ship by wireless.

New Service For Dogs

Word comes from New York of the establishment of a "Daily Dog Walking Service Company." The proposed charges would be \$5 for one walk a day a month; \$8 for two, and \$13 for three, with Sundays excluded. This opens up an avenue of happy release for many previously harassed husbands, especially of the apartment variety.

We improve falls in which they are different from our own.

It is far better to be hit on a money than broke on extravagance.

Longest Railway Bridge

Africa Spent Ten Millions On Struggle Over Zambesi River

Africa with its Victoria Falls possesses a greater fall of water, so far as height is concerned, than Niagara, and now the dark continent is setting hands to having the longest railway bridge in the world. It is located over the Zambesi river and is the last link in a chain providing Nyasaland and Portuguese East Africa with railroad transportation from Lake Nyasa to the east coast port of Beira, 810 miles distant. It cost \$10,000,000 and took two and a half years to build.

A fleet of flat-bottomed river steamers has been conveying passengers and towing barges and freight across the Zambesi from one end of the bridge to the other. The bridge itself had express have been involved.

The length of the new bridge is 2,064 feet, or a little more than two miles—a few feet longer than the entire length of New York's George Washington Bridge. It has thirty-three spans, that rest on concrete piers much 120 feet below the surface of the river—St. Thomas Times-Journal.

Machine Work Accurate

Best Of Hand Work Compares Unfavorably With It.

Praises are often sung concerning the marvels of handicraft, but, considerations of art apart, it must be admitted that for accuracy and precision the best of handwork compares very unfavorably with the possibilities of machine production. Hand engravers pride themselves upon being able to engrave the Lord's Prayer upon a five cent piece. They would, however, without hesitation deny the possibility of engraving it in relief on the end of a piece of steel having a square area of one inch in length. Yet such an actual type was cast from a matrix struck by a hardened steel punch having the words of the Prayer engraved in its end. The letters on the punch, and consequently on the type, measure .006 inch from top to bottom and stand up .0005 inch from their base. This is, undeniably, a marvellous engraving feat. In the Prints of White Museum, Belgium, one can see some specimens of similar skillful work done by hand on iron—usually the name of donors being engraved.

SCIENTISTS FIND FASTER WAY TO RELIEVE COLDS

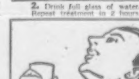

Ache and Discomfort Eased Almost Instantly Now

1. Take 2 Aspirin Tablets

2. Drink 8 oz. of water. Repeat treatment in 2 hours.

3. If it does not ease, crush one or two Aspirin tablets in a glass of water and gargle. This relieves the sore throat in 10 minutes.

When you have a cold, remember the simple treatment pictured here . . . prescribed by doctors everywhere today as the quick, safe, sure.

Because of Aspirin's quick-disintegrating property, Aspirin "takes hold"—almost instantly.

Just take Aspirin and drink plenty of water . . . every 2 to 3 hours the first day—less often afterward . . . If three days, use the Aspirin single. But be sure you get ASPIRIN. It is made in Canada and all druggists have it. Look for the name Bayer in the form of a cross on every Aspirin Tablet. Aspirin is the trade mark of the Bayer Company, Limited.

DOES NOT HARM THE HEART

Arena For Olympic Games

Men Working Constantly On Sports Ground In Germany

The vast sports ground and arena in West Berlin, where men are working day and night to have everything ready for the next Olympic Games, has been officially given the name of "Reichssportfeld," which has been preferred to the one which signified "Olympia-Town." Streets leading up to the arena are all being renamed. Certain powerful residents will in future find themselves living in "Fighting Arena Avenue," and dignified thoroughfares will also show in their new nomenclature the great importance attached to the new sports ground.

Keep You Thirty Years

Andrew Compton, 30-year-old recluse of Fishing, Long Island, is dead, true to his vow, made 30 years ago when his sweetheart jilted him, that he never again would appear on Fishing's Main street. He lived within two blocks of the street.

Stadium is the most expensive building in the world to date. Its standard value is set at \$20,000 a gram.

Accepts Appointment

Letting To Be Chairman Of The Dominion Marketing Board

Prof. A. A. Leitch, former professor of economics at the Ontario Agricultural College at Guelph, said he had accepted the chairmanship of the Dominion marketing board, subject to ratification of the appointment by the Dominion cabinet.

Prof. Leitch is also a prominent labourer.

The Dominion marketing board was established last year to regulate marketing of natural products under the Natural Products Marketing Act. Dr. George S. H. Martin, deputy minister of agriculture, chairman since the board was formed, has asked to be relieved of his duties.

Within the range of conditions permitting the free right of the night appears to be the most important factor. After about 3:30 p.m., the right of bees drops off with increasing rapidity, and after 4 p.m. practically all exits of the bees from hives are merely "play flights."

Tip Van Winkle slept for 30 years, but, of course, his neighbors didn't have a radio.

TELL YOU HOW TO COOK
3 VEGETABLES AT ONCE
IN THE SAME SAUCEPAN
with no odor . . . less cost . . . better results

Place each in its own bag made from Cananap Cookery Parchment. You seal in all the mineral salts and flavor, this way . . . and there's no odor, not even from cabbage or cauliflower. You need only use ONE burner—turned low.

And vegetables are only one food that can be cooked better with Cananap. For instance, when boiling or steaming fish, all the goodness and flavor are retained—no odor—no sticky pots and pans to scour. This alone makes Cananap worth using.

Remember that Cananap won't absorb odors. You rinse it off—hang it up to dry and use it repeatedly. Try it in a dishcloth, especially for glasses—it does not shed lint.

PUBLIC NOTICE TO POULTRY PRODUCERS

Notice to Poultry Producers is hereby given that the Manitoba Poultry Marketing Scheme, the Saskatchewan Poultry Marketing Scheme and the Alberta Poultry Marketing Scheme submitted to and recommended for approval by the Dominion Marketing Board on January 12, 1935, under the provisions of the Natural Products Marketing Act, will be voted on by the Poultry Producers of these Provinces on February 16th to 23rd inclusive. Please note the following:

- Only poultry producers who are not connected with a flock of more than 100 poultry are entitled to vote.
- Forms for registration and voting may be obtained from your local Poultry Producer's Representative or from the Poultry Marketing Board.
- Before registering your vote, you must first obtain from your Poultry Producer's Representative the name of the person who will vote on your behalf.
- Before making your vote, you must first obtain from your Poultry Producer's Representative the name of the person who will vote on your behalf.
- The names of the persons who are entitled to vote on your behalf must be obtained from your Poultry Producer's Representative on or before February 12th.
- Poultry producers have the right to object to the Poultry Marketing Board and to challenge the validity of the scheme, but must do so within the time specified in the scheme.
- Producers who object to the scheme must do so within the time specified in the scheme.
- Producers who object to the scheme must do so within the time specified in the scheme.
- Producers who object to the scheme must do so within the time specified in the scheme.

Dated at Ottawa this 22nd day of January, 1935. B. WEIR,
Dominion Minister of Agriculture.

Eternal War Being Waged With Latest Weapons of Science To Cope With Insect Pests

Arthur Gibson of Ottawa leads Canada's largest battle forces. He bids to rout of general or field marshal. He does not wear a uniform, neither do his men. He uses no soldier's modern weapons for his enemies are insects by the million, and his goal is to try to prevent as much as possible the estimated 100,000,000 worth of damage they do to crops and trees every year throughout Canada.

Gibson is the Dominion entomologist. He is a tall man and thin. He handles a big job, and to do it he has an army of assistants in all parts of Canada busy working at all times.

Gibson's enemies include the common mosquito, as well as many kinds of agricultural pests. His war is against some 30,000 species of insects, which are busy the year round, attacking wheat, corn, trees, livestock, humans, fence posts. Gibson's assistants can have a special set of species of insect to battle. From Gibson's office they come the orders and to it come the reports. And if Arthur Gibson wants to renew acquaintance with any of the 30,000 types of insects, he has but to go to the office adjacent to his where, under hundreds of glass cases, in thousands of bottles, mounted and unmounted, is a vast collection of the many of the 30,000 species of insects it has been possible to obtain.

But Mr. Gibson's army is not all located in Canada. He has scouts in other countries, in the laboratories of other governments, in the field, and along Canada's vast boundaries. To his office come reports of new insect menaces from other countries.

Not a flycatcher bulb or roach, not even a plant feeding by a returning Canadian from another land, passes through his alert body of hands without inspection. For one small plant may bring in a few insects, and within a year or two, tens of thousands of their offspring will be ready to do damage.

Device Works Efficiently

New Invention For Launching Lifeboat Has Been Tested

Ocean disasters, resulting from inability to launch lifeboats, will no longer be a menace of the sea, in the opinion of Dr. Charles Hunt, Washington inventor and former optician, who recently has completed a lifeboat launching device which operates with speed and efficiency.

It takes two men only one minute to hoist a Dr. Hunt equipment. A lifeboat over the side and it is safely to the water from a lifting ship. A boat with full crew was launched from a vessel travelling 15 knots an hour during a recent test in New York harbor.

A simultaneous release of both ends of the lifeboat from their davits eliminates the danger of capsizing. One man can release the boat. Previously the danger was in the release of one end before the other and thus spilling the occupants into the water. This occurred in the Merro Castle disaster.

Certificates to Dr. Hunt from the coast guard attest the fact that they have found his new device of work with efficiency.

Dr. Hunt turned to the field of invention upon the advice of Thomas A. Edison. He worked with a "Wizard" for a short while and then his interest turned to marine safety.

More Married Men

One Hundred Thousand More Married Men Than Marry Women In Canada

There are 100,000 more married men in Canada than there are married women, Rev. C. E. Wilson, general secretary of the Canadian Social Service Council, stated at a meeting of the body in Toronto. This suggests there are 100,000 more men in the side of Canada who are, or who think they are, married to someone in Canada," he said. He noted that the emigration of immigrants to come to Canada, leaving their wives behind.

A good thing about a stream-line train is that it gives you quite a little time to waste at the other end of the line.

The virus causing typhus fever is carried by mice and woodchucks as well as by rats, according to recent medical discoveries.

W. N. U. 206

Book For Beekeepers

Possible To Build Up Library With Little Expense

With the bees all snugly packed away in their winter quarters and requiring no further attention until spring, the beekeeper will find himself with a considerable amount of spare time that may well be devoted to other activities. Many of these idle hours may be pleasantly and profitably expended in reading one or more of the many bee journals, bulletins and books that are now available at reasonable prices. It is said that knowledge is power, and as a matter of fact, that statement is especially applicable to the beekeeper, for the one that has the greatest knowledge of bee activity is the one who is most likely to succeed in the most successful production of honey, and one of the best methods of securing this knowledge is through reading.

The beekeeper who has not yet started to build up a library of his own is well advised to do so. Such a library need not be an extensive or expensive one. While it is impossible to name here all the books available, one or two may be mentioned, but their titles will be found upon request to the Bee Division, Central Experimental Farm, Ottawa. Every beekeeper's library should contain a copy of the "ABC & XYZ of Beekeeping" which is the most complete book on beekeeping available and, by the way, a new edition of this book is appearing early in 1935.

"The Five and the Honey Bee" by Langstroth and Dadant and "Beekeeping" by Philbrick and others, etc., have not been neglected and reliable books on these subjects are available. Two monthly journals are published in Canada, "The Canadian Bee Journal" and "L'Abbeille et L'Éclair" while two other good journals have a wide circulation in Canada—"The American Bee Journal" and "Canadian Bee Culture." The Dominion and some of the Provincial Departments of Agriculture have issued bulletins on different phases of beekeeping which may be obtained upon request to these departments. The books named may be obtained through any dealer in bee supplies in Canada. Further information regarding them may be obtained from the Bee Division, Central Experimental Farm, Ottawa.

Right Use Of Lens

Wish Hologram Believes Education Needed Along That Line

Dr. E. E. Lloyd, eminent Welsh biologist, principal speaker at the prize-giving in Aberystwyth county school, England, forecast a great upheaval in the education of the world within the next 20 or 40 years. He laid stress upon the fact present-day conditions were more and more demanding education not for earning a living, but for the right use of leisure.

Because of the typewriter writing would soon become only a fine art. The adding machines were gradually superseding arithmetic, and the rapid development of wireless and gramophones was taking the place of the study of music. Education for the future meant the study of art, literature, the beauties of the countryside, and the features of the natural landscape. There were a hundred different ways when one came out to the interest of life, thus obtaining a reasonable occupation for hours.

The headmaster, Dr. E. Jones, in his annual report said that he was the fashion in some quarters to decried such of their foundations. Such pictures are frankly intended to be a source of pleasure, but if you are serious, by all means "shoot" them. Some of them will at least be funny. Parades scenes are effective if the camera is held low, or on the ground, for you will get the effect of feet marching into the camera—realism. This applies to all taking pictures of running or trotting races.

Swimming pictures are better if the camera is at a high level and you "shoot" almost directly down on the swimmers. From a single position get the ripples of the water and the light playing on them. Another out of the ordinary picture is that of action on a longshore boat, such as you see at sailing beaches and summer regattas. Get set with your camera at a high level within range of the spot where the tugboats "kick" the water. When you snap the picture,

Dr. P. Incey is pictured in a Baltimore hospital examining little "Miss" who, he was born "without a throat." The baby is being fed through a rubber tube inserted in her throat while efforts are made to extend the oesophagus by the grafting of living tissue. X-ray picture revealed that the oesophagus led only to the collar bone instead of the stomach.

Color Is Important

Pays Great Part In Determining Value Of Gems

Color of gemstones is important in determining the value of gems. Next in value to a red diamond comes a green. A few years ago a very dark colored diamond was found near Kimberley. When cut it proved to be a emerald green and, though it weighed only one and a half carats, it sold for \$1,800. A bright red diamond found near Kimberley was sold for \$4,500, though its weight is only six carats. It is this worth more than four times as much as a colorless diamond. The value of an old depends entirely on its color. A fine apple in white, greenish, yellowish or bluish colors is cheap, but a common apple with a green tint, the most valuable of all is the so-called bluish apple. A gem of this kind, weighing only 225 carats, sold for \$25,000.

Big Order From Russia

Soviet Government Making Large Purchases From Britain

Orders for machinery and equipment involving more than \$2,000,000 on a cash basis, for shipment to Russia, have been placed in Britain, Arms Limited, announced. In addition it was announced that large purchases had been made in the British market of goods for re-export, mainly from the British dominions and colonies.

The orders will provide employment for large numbers of persons and will be executed in from three to 12 months, the announcement said. They will be distributed in Manchester, Birmingham, Sheffield and parts of Scotland. Several groups of factories are involved, beginning with the production of raw materials and including every person to that of the finished product.

The SNAPSHOT GUILD

UNUSUAL ANGLES

You will be amazed how an old hat or angle will make an interesting picture of a commonplace scene. Like so many other things we do day after day, we can easily get into a rut taking pictures. Usually we take the normal, commonplace view—straight at the subject—as if it were a sacred rule of picture-taking to do this. It is not at all necessary to take pictures that way every time. Variety is the spice-of-the photography.

Direct scenes—the scurrying crowd on a regular game at winter sports—try usually more striking if taken from a high level. We are, of course, familiar with the reverse view—the pictures of skyscrapers with the camera pointed down. The buildings appear to topple off their foundations. Such pictures are frankly intended to be a source of pleasure, but if you are serious, by all means "shoot" them. Some of them will at least be funny.

Parade scenes are effective if the camera is held low, or on the ground, for you will get the effect of feet marching into the camera—realism. This applies to all taking pictures of running or trotting races.

Individuality can be shown in your snapshots by taking some of them at odd angles. Water scenes may picture problems by showing the use of water in the landscape in opposite directions of the fountain in opposite directions in the summer by the foliage of the willows. You can't get it at any angle but in the winter from high on the hill you can get the full picture. Old Jack Frost and King Winter make many picture problems by removing the leaves and the chances for getting artistic effects are often much more in your favor than in the summer.

In suggesting that you take some of your pictures from high levels, it is a building up on top of the picture. You can get a picture of a balcony or on top of a chair, a fence, or the top of your automobile, and get perspectives that will make attractively distinctive, straight views.

But all pictures do not lend themselves to this type of photography. Some don't make it a habit. You would get some queer results sometimes. As a good newspaper reporter doesn't tell him what to say and what to feel, so the successful amateur snapshot photographer should develop "no eye for pictures." It is that which instinctively makes the snapshot taker make good "angle" shots and what should be taken in the conventional manner. "Keep shooting" does it.

JOHN VAN OOSTERMAN

Important Factor Contributing To Canada's Success In Grain Production Is Use Of Good Seed

Result Of Farm Club Training

Winner Of 1934 Wheat Championship Former Member Of Canadian Council On Boys' And Girls'

The boys' and girls' farm club movement in Canada has been aptly described as a great extension school of education, and the results of this scheme during the past twenty-four years have been most impressive, not only in the number of its members, but in the results of its training. Many of the leading Canadian farmers of to-day are proud to note that the foundation of their success was laid in the knowledge gained at their boys' and girls' club, and every now and then some pupil finds himself thrust into the limelight. Without special mention, for the successes of pupils have been many, was the case in 1933 when Ian Smith, a member of the Eden Grain Club, won the oats title at the International Grain and Hay Show, Chicago and new by John Althoff, a young lad of twenty and a member of the Grande Prairie junior grain club since 1929. Won the hard fighting wheat championship at the 1934 International Show.

All these outstanding successes have been made possible by the extensive development of the boys' and girls' farm club movement that took place in 1930, when a national policy for the clubs was inaugurated by Hon. Robert W. Doms, Minister of Agriculture. In 1931 the committee submitted its report which was accepted as a basis of organization, and as a result the Canadian Council on Boys' and Girls' Club work has been organized in May of that year. Thus it is that considerable progress in agriculture among the young farmers and farmwives of Canada is being made for the first time in a national way and justifies to the fullest extent the slogan of the boys' and girls' farm clubs "Learn to do by doing."

Claims Patents Infringed

Nebraska Man Says He Invented First Practical "Plane"

Claiming to be the "designer of the world's first practical aeroplane," George A. Hughes is plaintiff in a federal court at Lincoln, Nebraska, in a suit against a cross-country air line, charging the company with patent infringement.

Hughes bases his claim upon one feature of a flying machine which he says he invented in 1903. In 1929, before the Wright brothers made their first flight. He seeks an injunction to prevent the company from further use, manufacture or sale of the "feature." The "feature," patented in 1932, is based on "improvement in aeroplane embodying the use of movable airfoils disposed at opposite sides of the fuselage in oppositely divergent planes in each other."

In brief, Hughes explains, it is the idea of tilting the wings upward in relation to the fuselage—an idea he asserts he copied from gliding birds in 1903.

He applied for his first patent in 1909, but the patent office seemed so skeptical about all flying machines at that time. He said when he met comes up for trial he will offer the application and a photograph of himself and the airplane taken in 1901.

Things That Last

Are More Worth Than Having Much Money

We think, perhaps, that the man who attends to his honor, his industry, his integrity, to his human duties, will find the money he needs for living coming his way. He need not worry too much about having a big automobile, or the most expensive suit of clothes, or the finest house. With his attention divided among other more lasting things in life he will not miss the absence of large sums of money or even the absence of as much money as in old moments he thinks he wants.—Columbus Dispatch.

Some of the worst fires on farms arise from the careless use of gasolene and oil. A useful and effective home-made fire extinguisher is a large metal pail full of water with a handy handle in it. A handy blanket or rug can usually be rolled up quickly and in the event of early application may prevent serious fire.

Canada's reputation as a producer of high quality grains and the continuous success of Canadian farmers in international and world grain shows clearly attention to the fact that among the various causes contributing to the Dominion's distinction as an agricultural country is the availability of many varieties of cereal grains of outstanding worth.

In the early settlement days Canada's farm pioneers were not so fortunate in this respect as the varieties of grain available were largely imported, and however well adapted they may have been to the soil of their native countries, they were unsuitable to Canadian conditions. It soon became evident that if that vast tract of country now known as Canada's wheat belt were to maintain a position of preeminence in the agricultural world it must have a variety of the best varieties of maturing early for the first of the year, and the variety then commonly grown. This imperative need for more desirable varieties led to the creation of the Dominion Experimental Farms in 1886. Under the auspices of this important organization a world-wide search was made for the ideal variety, which, ending in failure, led to the introduction of a program of seed made possible by results that have proved of considerable value. The most famous variety of any crop produced in Canada is far from the production of seed only in the Marquis kind of Canadian wheat. Other famous Canadian varieties are the Garnet, Bob and Huron.

To-day's Canadian farmer has the choice of outstanding varieties of spring wheat, fall wheat, oats, and barley, and a number of Experimental Farms still pursue their important role and there are promoting new varieties now under test, such as the red, yellow and white wheats, as well as certain barleys, possessing characteristics of immense practical importance and giving every indication of being destined to be included in the near future among the new famous varieties of Canadian grain.

Will Provide Work

Remond Neuprint Mills In Ontario To Produce Helicopters

Hon. Peter Hume, Ontario minister of lands and forests, predicted the reconstruction, beginning in April, of a new plant at Port Williams, Espanola and Sturgeon Falls, Ont., at an estimated expenditure of \$10,000,000 for the production of helicopters to be used in the manufacture of artificial silk.

With the work of remodeling the plant in the spring, and the subsequent operation of the three units, it is expected that the unemployment population of Sturgeon Falls, Espanola and a large number of that in Port Williams, will be taken off the relief lists.

The idea of converting the three mills to another use originated shortly after Mr. Hume took office last summer. At that time he was approached as to the feasibility of the plan. Mr. Hume has received definite assurance that the financing could be arranged, mainly by American capital.

British Hatters Worried

Say Man To Too Indifferent About His Hat

British hatters complain that a man is too indifferent about his hat. It is not always a matter of indifference. "When the driver's heater was broken down on the highway in London, which makes straw hats. The Turks used to wear fur caps because the Koran forbids shaving the face from the nose. The hatters of the East see as a relic of superstition, and thousands of hatters were ruined in Central Europe. The idea of a hat is modern. It is a relic mentioned in the classics. The word 'hat' occurs only once in the Bible."

See Northern Air Mark

Climbing almost three hours from the ground, a plane of 14 hours for the 1,465-mile route from Atlantic to McMurtry, Pilot Walter Gilbert, Canadian Airways' brought a heavy load of fur seals from Alaska to McMurtry. The plane was loaded at an average speed of 360 miles an hour. Actual flying time for the trip was 10 hours, 20 minutes. Reported by C. H. Dickson, manager of Canadian Airways headquarters.

Inched was first settled by the Irish.

NOTHING TO IT

The Review got quit: a job-est week-end when we learned that the local Social Credit group had ordered some printing done out of town at the same price as was quoted by the Review.

Our feelings were somewhat soothed however, when inquiry revealed that this was not the work of the Social Credit group, as a whole but rather the doing of only one of its members, who acted contrary to the instructions of the committee in charge of this work.

There has been a rumor about town that the local Social Credit Group was going to boycott those who were not supporters of, and sympathetic with, the social credit movement. The Review has most convincing proof that there is no such thing as the rank and file of Social Credit advocates in this town. The writer has had the privilege and pleasure of meeting the full committee of the local group, and, while not enrolled in the membership of the group, was received in the most courteous and friendly manner, and as a result of that meeting we are convinced that no such boycotting idea exists in fact at committee or among the majority of the group.

There may be one or two over enthusiastic and excitable members, as in all organizations, who allow their petty spite and animosities to get the better of them. Great causes and great men have been deflected by such people. The public can generally be relied upon to play fair and demand a square deal.

**CANADIAN
PACIFIC**

Here and There

Canadian Pacific liner Empress of Britain, flagship of the fleet of the company, sails January 19 from New York on its fourth round-the-world cruise, visiting 21 ports in 120 days. Returns to New York is scheduled for May 25, 1935. More than 21,000 miles will be covered by the ship on this cruise. This is Canadian Pacific's twentieth annual world cruise.

Four years old and still breaking records, the 20,000-ton Empress of Japan, newest and biggest of the Canadian Pacific Steamship Pacific fleet, made the run, Honolulu to Yokohama in 10 days, 14 hours, 58 minutes, setting the ship to a new record of speed supremacy for all legs of the Pacific crossing.

B. Cornwallis, fireman, Canadian Pacific Railway, Engineer James Y. Rose and Yardman J. Murphy, Port Arthur, aboard yard engine "400" pulling 120 empty cars from Port Arthur to Fort William, saw a woman lay her head on the rails just ahead of the engine. Cornwallis leapt through the cab window and from the front floor board jumped just in time to drag the woman clear of the track.

Miss Georgia Englehart, 21st girl Alpinist of New York, this summer, climbed Mount Assiniboine, highest peak in the Canadian Rockies, and in doing so completed her 100th ascent in the Blue Lake-Louise area. Two years ago she set a new woman's endurance championship by scaling 24 peaks in a single summer in that section.

Low winter fares from December 15 to February 22 are being offered by the railways covering round trips to Canada's Evergreen Playground, that favored region in British Columbia called Vancouver Island, with the beautiful capital of the province, Victoria, and all the sports attractions of summer available during the winter months brought within the purse limits of the average Canadian.

The big event of 1935 will be the pageantry and picturesque festival of the 25th anniversary of King George's accession to the throne, set for May 6 next, which will continue until well into July. Various meetings of Canadian athletic teams have been planned to connect with these events.

The Laurentian, Eastern Canada's winter playground, faces the biggest season in their history with an ambitious program of ski events calling for 15 weeks of various kinds, not counting the Dominion and International inter-collegiate championships extending from January 1 to April 21. It is announced by the Laurentian zone committee of the Canadian Amateur Ski Association.

Recommendation of Immediate Implementation of the Beatty Commission's report for professional ranks of the Civil Service of Canada was unanimously concurred in at a business session of the Professional Institute of the Civil Service held recently at Ottawa.

Activities Of Chemistry

Researches The World Over Making Important Discoveries

It is interesting to note the activities of chemistry in producing new articles, and in creating old products by new means from unusual raw materials.

For instance, an Italian has succeeded in making a cotton fabric from wood pulp. The pulp is pressed into sheets which are soaked in various solutions to liquify them. The resultant brew, if the time may be used, is then forced through sieves to form strands which are rolled on bobbins and later woven. The fabric compares with cotton, and is more than half as cheap.

An American has discovered a formula by which he claims he can produce excellent rubber from the common poinsettia, whose flower is so popular at Christmas. This plant grows abundantly in the southern United States.

Another American chemist has succeeded in fabricating a synthetic silk yarn from southern Georgia trees, which are first converted into a bleached sulphuric wood pulp. The remainder of the process is secret.

A North Wales peasant accidentally discovered a way to make a new kind of light, bright, and strong material. The substance expansion of the product is much less than that of the ordinary cement. It can be easily melted, and it proves to be an excellent key for plaster work.

Sweden contributes to the new products: one of her researchers has discovered a process of fabricating glass cloth. Melted glass is poured down a tube onto a die which rotates with great velocity. Centrifugal force disintegrates the liquid glass into a mass of extremely fine threads which can be spun.

The results from chemical researches give an indication of what is being done. New and unusual products are being turned out every week, both synthetic and genuine, and no man can truly predict what may subsequently be discovered. But the next few years will be full of it, and it is not too much to expect that the new products will be as good as the old, and as long as the discoverers have potential good for mankind there can be no objection.—Winnipeg Free Press

Cash Relief

Western Mayors Favor This Form Over Voucher System

Cash relief means everybody happy. However it has been instituted in Western Canada districts where it has disappeared and delegations to city halls have dwindled. And it gives the small merchant a more equitable share of relief than he gets under the voucher system.

Every delegate who tries to speak at this western mayors' conference at Calgary on the proposal to ask the federal government for that form of assistance reported a success of the money scheme in his city.

Winnipeg does not administer relief in cash, Mayor John Queen, Winnipeg, told the delegates that he was in favor of it and he hoped the matter would come before his council shortly.

Among those reporting success with cash relief were Mayor R. M. Pinder, Saskatoon, and Mayor Harris Fabreque, Moose Jaw, in Saskatchewan.

Alberta Bitumen

McMurtry Said Product Now Used To Manufacture Paint And Roofing Material

With a Calgary refinery material manufacturer offering an order for 10 carloads of Alberta bitumen, development of bitumen refining as a major industry of Alberta appeared definitely nearer. Riddle of the McMurtry bituminous sands, if it is carried, has been solved, and field experiments have proved the success of the system used.

During the past few months, says reports from McMurtry, the International Bitumen Company actually has shipped two carloads of the extracted material from its plant at Bitumont. The bitumen has been utilized in paint and roofing material manufacture, and tests have revealed that its quality is high.

The carry-over of wheat in Canada at July 31, 1934, amounted to 251,748,185 bushels. Adding the crop of 1933, estimated at 209,729,000 bushels, and imports of 413,165 bushels, the total available for distribution was 461,822,352 bushels.

The Necessity For

Keep Accounting

Only Way Of Keeping Posted On What The Farm Is Earning

This year far more farmers than ever before are making an early detailed list of the items of their farm business to see what they own and what they owe; in short to find out how they stand as they wind up each farming year and begin another. Some record of receipts and expenses, together with an inventory (a list with values of livestock, feed, implements, and any other asset on hand) is really necessary. The record not only shows the farmer what he is actually worth and whether or not he is getting ahead, but also gives him a basis for a statement for obtaining bank credit. Further, the record includes a list of property for collecting fire insurance and settling estates, as well as a guide for the estate planner.

A record of each department of the farm business should be kept because it is the only way of finding out which part of the farming pays and which does not. To assist the farmer in this very important matter, the Dominion Department of Agriculture has issued a very simple and useful little account book. No special knowledge of accounting is necessary, and a record of transactions can often be made in less than ten hours per week. The little book, though simple, is a great step in advance of keeping no accounts whatever.

Julius Half Century Ago

Deceased Most, Drunk, And Else-Wildly Considering Verdict

The strain imposed upon elderly citizens amounted to nerve pain, of which complaint is being noted, must have been a good deal more common than it is today, according to a London news reference. Until the passing of an act for their relief in 1870, justices were treated for their old people in the criminal they were summoned to try, it is pointed out. Among other hardships they were denied "mud, drink, or fire" while considering their verdict, and in a case tried by Lord Kenyon the jury had to sit for 13 hours without refreshment of any kind.

In some courts the instruction "Lay your heads together to be able to sleep" was given. The jury often became the level of their box and counsel as to their verdict.

The export movement has improved for practically all Canadian canned fruits and vegetables. Canned apple exports have increased over 200 per cent since 1931. Canned asparagus has increased from 94 cases in 1931 to 1,758 in 1933 and 4,981 cases during the first nine months of 1934.

Shipments of canned pears have moved from a reported volume of 48,000 cases in 1931 to 108,000 cases in 1933 and to over 134,000 cases during the first nine months of 1934.

Similar proportionate increases have occurred in peaches, baby-beans, beans, carrots, corn, spinach and tomatoes.

Machine Works Fast

A machine, which takes and delivers a picture fully framed in chromium 20 seconds after ten cents is deposited, was displayed at the Cleveland exposition. The device is enclosed in a booth. The subject looks into a lens mirror, adopts a flattering pose, puts in a dime and has his picture almost before he has dropped his "bribe" coin.

Marketing Canadian Honey

Lowered Production Has Had Effect Of Stabilizing Prices

Unfavorable weather conditions during three successive years have resulted in a honey crop considerably below average in Canada as well as in other countries supplying the United Kingdom market. This, however, has had a favorable effect on the marketing situation as it has enabled producers readily to dispose of their surplus stocks at slightly higher prices. During the past five years Canadian honey has improved its position on the British market. To hold this advance on a strongly competitive market, it is essential that Canadian producers offer only a well-graded high quality product, particularly as competition has been intensified by the recent restriction imposed by continental countries and the consequent untimely of foreign hives on the British market.

Football A Social Event

Londoners And Tea Served At Games In England

Football in England is turning from a sport to a social event and games are being made an all-day fete. Spectators arrive long before the game is due to start, so that they can have luncheon at the ground. And when the play is over they stay to tea. All the big clubs have availed to the possibilities of providing refreshment for spectators. Woolwich, Arsenal, West Ham, Charlton, Nottingham Forest and Notts County all provide meals and drinks, and dozens of clubs are preparing to follow their example. The football grounds of the near future will resemble first-class hotels.

Legacy Has Hiding Attached

A legacy of \$20,000 has been left to the Jewish community in Warsaw, Poland, by a man who died in the city. The legacy was left to the Jewish community in Warsaw, Poland, by a man who died in the city. The legacy was left to the Jewish community in Warsaw, Poland, by a man who died in the city.

The packing of tomatoes in Bermuda is based on what is popularly known as the British Columbia 20-lb. The latter has been in use in Bermuda since 1931 and has now been modified in several minor respects.

The tendency of Canadian firms seeking a market in Great Britain to appoint exclusive agents in London or elsewhere in the south for the whole country still continues. In many cases, writes the Canadian Trade Commissioner, in making such an agreement they are depriving themselves of the opportunity of making sales in Scotland. That Canadian firms desiring representation in Great Britain should at least take into careful consideration the situation separately representative in Scotland really admits of no argument.

Familiar With Grades Judging from the large demand for poultry marked by the official grades, it is apparent that Canadians are becoming familiar with these grades. More tagged poultry was displayed and sold on grade during the recent holiday season than in any year since grade tagging was introduced.

When the last agricultural census was taken in the United States, in 1930, there were 6,288,643 farms reported.

Used Canadian Timbers

The civic authorities of Birmingham, England, have built a new school in which Canadian timbers are used exclusively. Douglas fir was used for the framework and the lower part of the outer walls while the doors, window sashes and frames are of Sitka spruce. No preservative or paint was used on the red cedar shingles. The cost was reduced to about 25 per cent less than brick.

Canada's Dairy Industry

Is Steadily Expanding

Enter Main Product, But Output Of Cheese Growing

Canada is potentially a large producer of cheese. It has produced a huge output in the past, and may do so again. For a good many years, however, the trend in Canadian dairying has been to increase the output of butter and to allow the production of cheese to decline. In recent years, at all events, this tendency has been somewhat reversed, and the total production of milk. The greater part of the Canadian cheese production has long been exported, but both production and exports are much lower today than they were a score of years ago. The consumption of cheese in Canada, for instance, is a large consumption of butter. There is also a large consumption of fresh milk and cream.

During even its modern position in Canada to the introduction of the factory system for the making of cheese and butter, and the facilities offered by improved methods of cold storage. The first Canadian cheese factory was established in Ontario in 1860, and the first Canadian creamery for butter making in Quebec in 1873. The first centrifugal cream separator was imported from Denmark in 1882, and the government organization of cold storage services began in 1905. In 1908, the Canadian cheese output was 1,141,570 pounds, and of butter 10,640,723 pounds. Butter reached its maximum production in 1913 at 14,124,541 pounds, and cheese attained its maximum a year later at 233,950,716 pounds. Since that time there has been a large increase in the quantity of fresh milk and of butter consumed within the Dominion.

Was Once An Ornament Many People Remember When Tomato Was Considered Posh. There are people alive to-day who can remember when the tomato was grown merely as an ornament and it was believed that the fruit was poisonous. Some hold, however, that it was not so, and eventually they discovered that the tomato was not only edible, but a delicious fruit. So the tomato is today a favorite garden vegetable.

But it is only in recent years that the tomato really came into its own. This was when it was found that the tomato could really be a flavor intensifier. Then a few years ago some one, imitating the enterprising orange growers, started the tomato pulp craze. Now it rivals orange juice as a breakfast and dinner appetizer.

According to the Federal Department of Agriculture the story of the tomato cannot be one of the epic of Canadian trade. Ten years ago it was one of the least important of the food commodities sent abroad from Canada. To-day cannot be called the largest of Canada's canneries packed. By 1927 the export of Canadian canned tomatoes rose to what was then a record of more than 300,000 pounds. In 1934 nearly 30,000,000 pounds were exported to 31 different countries, 13 of which are British. The British alone took the major part, nearly 9,000,000 pounds. Hence the interest of growers in the investigation into the canning business by the Mass. Haying Commission. A square deal for the growers is vital—London Free Press.

FANCIFUL FABLES

THEY WERE SUCH A BACCHANAL AND I THOUGHT I WOULD BE IN THE MIDDLE OF SOME DAY, SO I HAD IT SENT HOME, C.O.D.

The costume of a well-known R.C. railway ticket agent is the great attraction—It is reported to possess more than 20,000. First numbers of newspapers and magazines form a second collection. But it is highly likely, incidentally, a number of people make it a practice to keep copies of papers in which interesting news is given.

A London man who was an ardent theatre-goer had a whole library of theatrical programmes. A second collection of plays he had seen. Each had his remarks carefully noted in the margin. His collection was so complete that if you mentioned the name of an actress he could tell you in a few minutes all the plays she had appeared in since 1870.

Strangers still was the hobby of a sailor. During a storm in the Pacific he collected the fragments of the ship and fell upon them. The sailor, who was ship's cook, had the idea of starting an aquarium on board. He was a very good cook and caught alive was put into his fish tank. Unfortunately for him, his fish caught in the Pacific Ocean, and stood little chance in a European water, and a week of snow in the Thames killed them all.

Matches, covers had a strange fascination for King Chulalongkorn of Siam, who died in 1910. He had a collection that contained many hundreds, and wrote down the names of different languages were to be read on their labels.

For a painstaking hobby the example of a Scots lawyer would be hard to beat. This gentleman, who was very proud of his ancestry, composed a book in which every reference he could find to persons of the same name as he himself.

At years went by his "cutting" grew until they ran into thousands. Then he commenced the task of sorting them out and trying to connect up various branches of the family. The whole task must have cost him ten hours every day, and he was a small figure in pants and slippers. Surely a strange hobby!

But even stranger—probably, in fact, the queerest hobby—is that of a clergyman who collects mangle-boards of every type!

Was Once Used To Hunt Buffalo On

Remnants of early western plains of many a wild ride for buffalo, of the hunt itself, is the background of an aged, but still workable 44 that is in the hands of a hunter, who is a descendant of Joseph Sweeney, an Indian, living on Duck Lake reserve in Saskatchewan.

Provincial museum officials would welcome it.

The ancient fireplace once was used by a number of Henry's Dan, Duck Lake, at the time of the uprising. It belonged to an Indian named Sumner, who died when his grandson, the present owner obtained it.

Three Indians, still living, as well as Sweeney's father, know his history by heart. Their story is that of a hunter who was used to hunt buffalo, his owner on horseback.

Ontario Buys Partridges The Ontario department of game and fisheries announced it had contracted to buy 2,500 Ontario partridges from the Alberta government at \$1 per bird. This bird is not indigenous to Ontario and the government has for some years been attempting to stock the province with them. Previous imports from England cost \$7.50 per pair, and the fowl failed to thrive.

No Billboards in Hawaii Among the other attractions Hawaii now offers its visitors pure and unadulterated scenery. In all Hawaii there is not a single billboard. Beer signs are scarce, with the advent of repeal were ordered removed recently after an incident in which a car was overturned. The authorities said the billboards were not safe. So now there are none in Hawaii.
